

Emcien A SUITE OF SOFTWARE TO AUTOMATE DATA ANALYSIS

Emcien's pattern detection engine reveals highly relevant connections across multiple data types.

Extracts relevant answers from data.

Delivers actionable results automatically.

Scalable, economic, fast solution.

Data Discovery

Emcien's pattern detection engine automatically analyzes data to reveal relevant and actionable connections in a matter of minutes. Without writing a single query, the engine turns raw data into an interconnected data map and a list of ranked insights. The software empowers analysts to work directly with the most relevant data without specialized math and computer science skills.

The Emcien Advantage

- Automated pattern detection. No rules, no queries, no hypothesis testing.
- Intelligent algorithms extract answers from streaming or static data.
- Language agnostic algorithms convert raw data into clear patterns and trends.
- Highly scalable for large, complex data sets.
- Available as a flexible cloud solution or virtual appliance behind your firewall.
- Fast and easy deployment, low maintenance, and low cost of ownership.
- Pre-computed results provide information through APIs in real time

Emcien's Pattern Discovery Engine means revealing valuable, previously undiscovered patterns faster than ever before. Critical information is extracted from all forms of data and results are delivered through an intuitive user interface or APIs.

Emcien's pattern discovery algorithms eliminate manually intensive analysis, revealing the significant connections in your data regardless of data type, source, or language.
